Data-Driven & Evidence-Based Program Cycle

Design
Over time, theories of change are reviewed and revised based on learning and evidence generated through M&E and research.

Design
Evidence, existing data, learning from past projects, and theories of change are consulted and used to inform project design and learning priorities.

Design
M&E and (where relevant) research plans are put in place that are adequately resourced, address learning priorities, enable collection of good quality (relevant, timely, reliable) data, and include plans for data analysis and use.

Start-up
Data collection and management tools are developed/put in place. Data quality assurance processes (SoPs) are put in place. Staff are trained to fulfill their data collection, management, and analysis responsibilities.

Implementation
Data collection activities are conducted in accordance with M&E and (where relevant) research plans.

Implementation
Data collected are analyzed regularly and used to inform programming along the way. Data quality is checked in accordance with SoPs.

End of Project/Project Phase
Final analysis is conducted of program data generated through M&E and (where relevant) research. Findings and lessons learned are captured.
